Contents

Preface	12
Acknowledgments	13
1 Introduction	15
1.1 Demystifying GIS	15
1.2 Finding Free Data Sources and Applications	16
1.3 Becoming a GIS Programmer	18
1.4 What Are You Getting Yourself Into?	18
2 Vectors	21
2.1 Raw Materials	21
2.2 Raster Data	22
2.3 Vector Data	26
2.4 Types of Vector Data	26
2.5 What Data Is Available?	31
2.6 Know Your File Formats	33
2.7 Anatomy of a Shapefile	34
2.8 The Downloadable States of America	34
2.9 Downloading a Viewer	36
2.10 Styling Your Layers	39
2.11 Viewing Multiple Basemap Layers	40
2.12 More Data, Please	42
2.13 More International Data, Please	42
2.14 When Good Data Goes Bad	43
2.15 Saving Your Map in ArcExplorer	44
2.16 Conclusion	46
3 Projections	47
3.1 The Round Earth	47
3.2 Cartesian Planes	50
3.3 What Is a Projection?	54
3.4 Changing Projections in ArcExplorer	56

3.5	What Does <i>Round</i> Really Mean, Anyway?	57
3.6	Coordinate Reference Systems	59
3.7	Getting Your Data Layers Aligned	67
3.8	Reprojection Utilities	69
3.9	Conclusion	72
4	Rasters	73
4.1	Getting Started with Raster Data	73
4.2	Terraserver-USA: Another Source of Free Raster Imagery	76
4.3	Mosaics and Tessellation	78
4.4	Temporal Analysis	80
4.5	Panchromatic vs. Multispectral	83
4.6	Scale and Resolution	88
4.7	Orthorectification	92
4.8	Downloading Free Rasters	95
4.9	Conclusion	108
5	Spatial Databases	110
5.1	Why Bother with a Spatial Database?	110
5.2	Installing PostgreSQL and PostGIS	111
5.3	Adding Spatial Fields	113
5.4	Inserting Spatial Data	119
5.5	Querying Spatial Data	120
5.6	Introspection of Spatial Data	121
5.7	Importing Data	123
5.8	Manipulating Data	124
5.9	Exporting Data	125
5.10	Indexing Data	128
5.11	Spatial Queries	130
5.12	Visualizing Data	134
5.13	Conclusion	135
6	Creating OGC Web Services	136
6.1	Sharing the Wealth	136
6.2	OGC SOA for GIS	137
6.3	Installing GeoServer	139
6.4	Adding Shapefiles Using the GUI	141
6.5	Adding Shapefiles Manually	145
6.6	Adding PostGIS Layers	150
6.7	Styling with SLD	153
6.8	Conclusion	158

7	Using OGC Web Services	159
7.1	Understanding WMS	159
7.2	WMS GetCapabilities	160
7.3	WMS GetMap	166
7.4	Understanding WFS	167
7.5	WFS GetCapabilities	168
7.6	WFS DescribeFeatureType	171
7.7	WFS GetFeature	172
7.8	Filtering WFS GetFeature Requests	173
7.9	Conclusion	179
8	OGC Clients	181
8.1	Mapbuilder	181
8.2	OpenLayers	192
8.3	uDig	201
8.4	Conclusion	203
9	Bringing It All Together	204
9.1	From CSV to SQL	204
9.2	Geocoding Your Data	217
9.3	Adding PostGIS Fields	225
9.4	Setting Up OGC Services	228
9.5	Tiling vs. Styling	231
9.6	Creating a Slippy Map	235
9.7	Beyond the Web: 3D Viewers	239
9.8	Conclusion	244
A	Mac/Linux Installation	245
A.1	Installing GDAL/Proj/Geos	245
A.2	Installing PostgreSQL and PostGIS	247
A.3	LibTIFF and LibGeoTIFF	250
B	Installing Groovy	251
B.1	Unix, Linux, and Mac OS X	251
B.2	Windows	252
	Index	255

Preface

We are on the edge of the next big wave of technology, and it has GIS written all over it. Soon every new cell phone will have GPS (or some form of location-based services) built in as a standard feature. Nearly every major database vendor now includes native geographic data types. Free sources of geographic data and free applications are just waiting for you to pull them together and do something clever. You might create a simple digital version of the pushpin map, or you might write the next Google Maps killer.

All of our lives we've asked "Where am I?" and "How do I get from here to there?"

You start by rolling over, then crawling, and then walking. You walked to school or were driven or took the bus. Maybe you eventually drove yourself. When you got older, you joined a society of people who use different modes of transportation every day. We ride subways to work. We take airplane flights to far-off places. We visit client locations. We attend conferences or night classes. We go shopping. We eat out at restaurants. Unless you spend your days physically tied to something large, heavy, and immobile, you probably spend a significant portion of your time thinking about how to get from here to there and back again.

And how does traditional geography make that easier? It offers you vector and raster data, orthographically rectified and portrayed in the Universal Transverse Mercator projection. (Don't you feel better already?)

Even asking a simple question like "What is your current latitude and longitude?" will likely cause most people to back away slowly, hands up, muttering, "That's OK—I'll ask someone else for directions."

In *GIS for Web Developers* we'll talk about GIS in simple terms and demonstrate its real-world uses.

The Pragmatic Bookshelf

The Pragmatic Bookshelf features books written by developers for developers. The titles continue the well-known Pragmatic Programmer style, and continue to garner awards and rave reviews. As development gets more and more difficult, the Pragmatic Programmers will be there with more titles and products to help you stay on top of your game.
